

ENERGY ATTIC

BY MEREDITH KNIGHT

YOUR ENERGY EFFICIENCY EXPERTS

Specific Energy Solutions for Your Specific Home

Since early man first built fire in caves to keep his family warm and comfortable, energy efficiency has presented a challenge. It's no different today as we seek methods to heat and cool our home wisely, economically and responsibly.

THE CHALLENGE

Your home is as unique as you are. The exact solution to make your neighbor's home energy efficient wouldn't necessarily work for yours—and vice versa. That's why the efficiency experts at Energy Attic employ a proven three-component Energy Reduction System tailoring a solution to meet the specific challenges of each individual home.

HOW DOES IT WORK? GLAD YOU ASKED.

RADIANT BARRIER

They begin with 99 percent aluminum foil Radiant Barrier to reduce attic temperatures. This will cut your energy costs up to 40 percent while making your home more comfortable. It will also reduce those annoying pockets of hot and cold air and keep temperatures consistent throughout your home.

Energy Attic's radiant barrier accomplishes all this by reflecting 97 percent of the radiant heat coming into your attic. It's the most effective radiant barrier product on the market, coupled with Energy Attic's proven professional installation—together the best method for our unrelenting Texas weather.

INSULATION

The second component of this fool-proof system is Johns Manville Climate Pro™ blown-in insulation to reduce the transfer of hot or cold air into your home. It's made from 25 percent recycled glass (making it greener than other insulation products) and it contains no formaldehyde.

This is a healthy and environmentally-friendly product. Johns Manville insulation doesn't cause itching and is guaranteed not to settle over time, making it a lifetime solution. Experts agree that having the correct amount of insulation is key in reducing your home's energy costs. Energy Attic makes sure you have precisely the right amount required for your home. We also offer insulation removal services.

SOLAR VENT

Solar-powered attic fans by Sunrise Solar™ are the final, but crucial, component of the Energy Attic system. These solar vents serve to reduce attic temperatures, bringing your energy bills back down to earth, while actively removing hot air and moisture from your attic. Since they're powered completely by the sun and are free to operate, they pay for themselves—through reduced energy bills—in a short period of time. The solar vent requires no maintenance, is extremely quiet and comes with a built-in thermostat. It has an excellent warranty and is designed to withstand the extreme Texas weather.

ATTIC TENTS

In addition to these three highly-efficient products, Energy Attic can provide your home with attic tents to stop hot or cold air transfer from your attic access into the air-conditioned areas of your home. Attic tents also serve to improve your family's indoor air quality by preventing dust particles from entering your living areas and are easy to access with a simple zipper opening.

TOP REASONS HOMEOWNERS CHOOSE ENERGY ATTIC RADIANT BARRIER

- Save up to 40 percent on year round utility costs
- 97 percent reflective material makes your home more comfortable by reducing pockets of hot and cold air
- Green energy solution
- Attic temps reduced from 25 to 50 degrees during the summer
- Heat prevented from escaping through the roof during winter months
- Reduces U.S. dependence on foreign oil by reducing energy consumption
- Non-toxic, non-carcinogenic, maintenance-free materials
- Pays for itself in a short period of time
- **Qualifies for the Energy Tax Credits through December 31, 2011**

REVISED TAX CREDITS 2011

Perhaps the best news of all is that your conscientious decision to make your home more energy efficient and environmentally-friendly can earn you tax credits. Installation of Foil Radiant Barrier and/or insulation, for instance, could earn you a tax credit of 10% of materials up to \$500 if you install by December 31, 2011. You could still earn 30% of both materials and labor on our Sunrise Solar vents through 2016. 

Call Energy Attic at 972-548-0088 or visit EnergyAttic.com to find out about these exciting tax incentives and to discuss the one-of-a-kind solution for making your home more comfortable and energy efficient.
